Отчет РК-2 по дисциплине

Парадигмы и конструкторы языков программирования

Задание

- 1. Проведите рефакторинг текста программы таким образом, чтобы он был пригоден для тестирования
- 2. Для текста программы создайте модульное тестирование с применением TDD-фреймворка from operator import itemgetter

Текст программы main.py

```
from operator import itemgetter
class Microprocessor:
    def __init__(self, id, count, price, comp id):
        self.id = id
        self.count = count
        self.price = price
        self.comp_id = comp_id
class Computer:
    def __init__(self, id, name):
        self.id = id
        self.name = name
class MicrComp:
    def __init__(self, micr_id, comp_id):
        self.micr_id = micr_id
        self.comp_id = comp_id
```

```
